DETAILED ACTION

Information Disclosure Statement

1. The information disclosure statement filed 5/5/04 fails to comply with 37 CFR 1.98(a)(2), which requires a legible copy of each cited foreign patent document; each non-patent literature publication or that portion which caused it to be listed; and all other information or that portion which caused it to be listed. It has been placed in the application file, but the information referred to therein has not been considered.

Claim Objections

2. Claim 28 is objected to because of the following informalities.

At the end of line 3, after the “;” the word “and” should be inserted. Also, in line 5, the word “,and” should be inserted after the phrase “storage area”.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Art Unit: 3653

4. Claims 26-30 are rejected under 35 U.S.C. 102(e) as being anticipated by Katou et al (US 2004/0182677A1). Katou et al discloses a note validator (30), a validator processor (35) with memory (107d), a note box (60, 80 and 81), a temporary storage hopper (40), a transportation unit (501a-h), (502a-b), (503a-c), (504), (901a-e), (902a-e) and (903a-e), the notes being sent through validator (30) in either direction (501b). Note that the deposit/withdrawal port (20) can be construed as the validator opening, with the entire structure (1) being construed as the validator. Note also that bill discrimination unit (30) can be construed as inherently sensing actual bill pattern information for comparison with template patterns stored in memory (107d) and as inherently determining the value of bills detected as received and dispensed by the apparatus.

5. Claims 26-30 are rejected under 35 U.S.C. 102(e) as being anticipated by Graef et al (US 6,315,194 B1). Graef et al discloses a note validator (72 and 258), a validator processor (254) with memory (256) (see also Graef col. 6, lines 10-25), a note box (30, 32, 34, 36, 38 and 40), of which any of said note boxes can be used as a temporary storage hopper, a transportation unit (17, 192, 285) (see also figures 12-15), the notes being sent through validator (72 or 258) in either direction. Note that the deposit/withdrawal port (20) can be construed as the validator opening, with the entire structure (10) being construed as the validator. Note also that bill discrimination/validator unit (72 and 258) can be construed as inherently sensing actual bill pattern information for comparison with template patterns stored in memory such as

(256) and as inherently determining the value of bills detected as received and dispensed by the apparatus. See also Graef, col. 14, lines 11-55.
